3 – Lab 3 : continue with linux
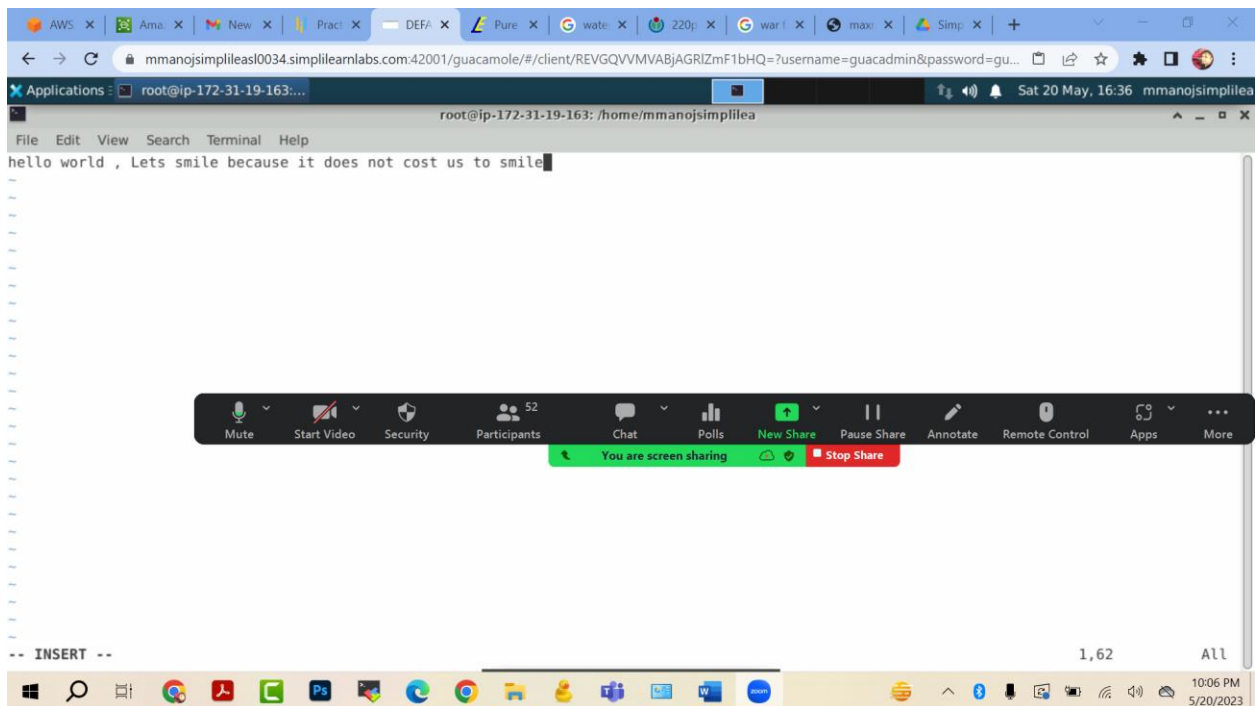

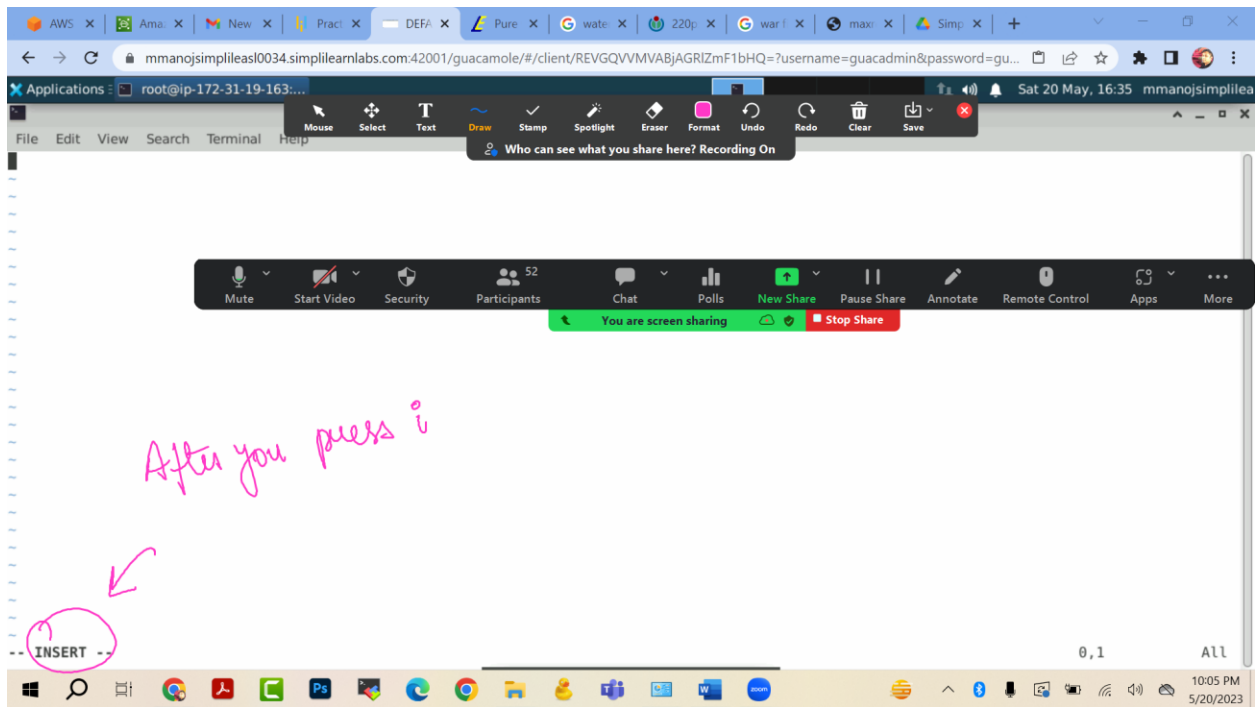

3) we can use vi command to create and edit the file

> vi devops.txt (press enter)

A file editor will open

To start writing on this file edition press -> i button

After you press i

-- INSERT --

root@ip-172-31-19-163: /home/mmanojsimplilea

hello world , Lets smile because it does not cost us to smile

-- INSERT --

1,62   All

To come out of this file we will press esc key and then :wq
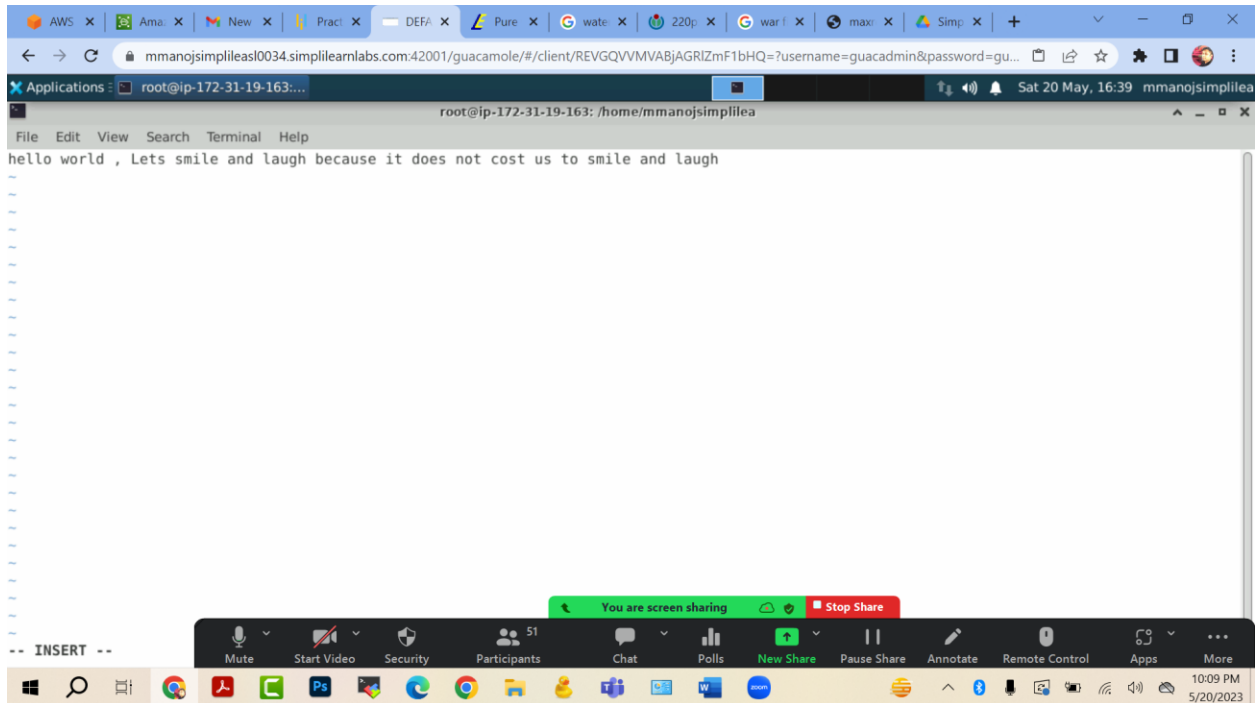

Which means save and quit

You will simpli come out of the file

Now lets suppose we want to edit the file? How we will do it?

vi devops.txt

again the editor will open

press i...edit the content what ever you want and again press esc :wq

Esc :wq

cat devops.txt

```
root@ip-172-31-19-163:/home/mmanojsimplilea# cat devops.txt
hello world , Lets smile and laugh because it does not cost us to smile and laugh
root@ip-172-31-19-163:/home/mmanojsimplilea#
```

4) nano file editor : Same as Vi file editor ….but only available with limited linux versions

==nano simplilearn.txt==

a file editor will open….

Hello world, I am simplilearn

to come out of this file …press ctrl x and then press y button and then press enter key

cat simplilearn.txt

Hello world, I am simplilearn
